Hi all:

I've updated the 'amlpmpdata' package with more sample details from the Leucegene and OHSU Beat AML data projects. As of now, there are 478 RNA-Seq libraries in OHSU Beat AML, and 488 listed for Leucegene. These are not processed locally at present (but can be eventually).

I've also updated the 'rna_seq_ms_patients' data frame with the best current clinical annotations I have for the AML PMP retrospective and validation cohorts.

Finally, I've added one other data frame called 'aml_pmp_merged_data_sources' that lists paths to project-level data files (Depth at all sites, expression matrices, etc.)

Let me know if there's anything else that should be added. This is available as:

install.packages('/home/rdocking/karsanlab_research/amlpmpdata_0.5.0.tar.gz', source = TRUE, repos = NULL)

Or, clone from Bitbucket and install:

https://svn.bcgsc.ca/bitbucket/projects/KLREB/repos/amlpmpdata/browse

NOTE that this repo contains somewhat-sensitive information for both AML PMP and BEAT AML, so please don't share beyond this group.

Cheers,
Rod
